

# Mega Pit Stops

Everyone knows the pit stops from Formula 1 races: choreographed and rehearsed to perfection - each team member is a cog in an unbelievably complex machine. But let's put things into perspective: pit stops during races are one thing, but they can't hold a wrench up to the mega pit stops this show's got for you.

Thanks to spectacular imagery, cutting-edge CGI and up-close-and-personal proximity to people and creators, Mega Pit Stops provides an all-access look behind the scenes of these mega endeavours. A real inside story behind the most impressive mega pit stops in the world.

The series shows what happens, when an Airbus A380 gets taken apart and stripped of its colours within a crazy short time frame. Mega Pit Stops documents how stressful the fight against the clock is when a cruise ship descends to the pit stop or one of the fastest trains in the world has to be completely overhauled in just ten days.

## Meticulous plannings under immense time, money and safety pressure

These pit stops require meticulous planning, all the while keeping in mind time frame and safety regulations. The logistics of making sure each expert worker is there where they are supposed to be with the tools needed to complete the job on time and to perfection This five-part series reveals the most fascinating and mind-blowingly huge pit stops on the planet. An insane effort, a constant race against the clock all packed into the most intricate and complex logistical package ever put together.

## Episode Structure

Each episode begins with a series of breath-taking establishing shots focussing on the star of each episode: the plane, the ship, the train, the submarine - arriving at their respective pit stops. The viewer will get an idea of the logistical effort it takes to “park” these monsters. We're talking centimetre precision manoeuvres of vehicles the size of several football fields. And once the plane, train or ship is parked, an army of experts - each in their own right - descend upon the work station and get to work immediately. For once it's in the hangar/dry dock or railway yard, the countdown begins.

Hundreds of experts descent on the plane, train or ship and try to check each single part inside out. In case any part is defective, it needs to be replaced with record speed. For every additional hour the vehicle is out of service, potential profits are at risk.
